

Vehicle Installed with Kayaba's Racing EPS Takes the Championship in the 24 Hours of Daytona Race

One of the world's three leading endurance races, the 24 Hours of Daytona Race was held from January 26 to 29, 2023, in Florida, United States. Vehicles installed with Kayaba's racing EPS dominated the race, winning positions from 1 to 13. Of particular note was the recently developed Kayaba racing EPS installed in the championship vehicle.

Kayaba's racing EPS could be found in 25 out of the 61 machines competing in the race's five classes, including the GTP class which was added this season.

Our EPS will also be right in the heat of the competition in the Super GT and Super Formula Championship, so look for more world-class performances from racing machines featuring Kayaba-made products.

EPS: Electric Power Steering
