

Editors Script

Ten years have already passed since Takako Industries, INC. joined KYB Group. Meanwhile the company has written three articles for KYB Technical Review as a member of the Group. I think that the appearance in the articles, although relatively small in number, has probably made customers from every field recognize Takako's original products.

With Takako's motto of "creating a company to achieve what no other company in the world has achieved by using techniques you can't find anywhere else", I'm committed to continue devoting myself to the development of technology, including manufacturing techniques, and introducing that technology to the world via KYB Technical Review.

(KAWANO Yoshihiko)

I had the opportunity to carefully read non-electronic technical literature since I joined the KYB TECHNICAL REVIEW Editorial Board. Reports on hydraulic or mechanical engineering were exciting for me, but they were often so technical that I could not understand them easily. I often had trouble with reading through the text in Editorial Board meetings, taking much longer than the other editors. For example, when I read a report illustrating the movement of a hydraulic system, I imagined in my own way the dynamic movement in my mind. If I could not figure it out, I tried to understand what it exactly was by referring to the related literature. I would like to continue working hard to learn technology that is new to me, including hydraulics, through the Editorial Board.

(KANAI Akifumi)

I believe I'm involved in work with an eye toward the future, trying to determine, plan, act on and achieve a priority. But in reality I feel I am occupied with routine business to solve the problems facing me. In the Editorial Board, I sometimes happen to find new technology leading us to the future, or encounter a stimulating article on an achievement of what I could never achieve myself. Moreover, when I find a name with whom I have been involved with, I'm happy to see proof of his/her growth. Once a latest issue has been released, it is time to start on another issue, and I have to find a new theme for writing again. With our mission of creating another Technical Review repeatedly, I would like to continue working hard.

(NOGUCHI Kouichi)

Notification regarding website release

Thank you for your support for KYB TECHNICAL REVIEW. Since our 50th edition (issued in April of 2015), we have been releasing these reviews on our website with the aim of enabling more people to read them.

We will also continue to publish the booklets as usual, so please read the printed version and/or the website at your convenience.
